Confidence in a connected world.  symantec.

TOTAL DATA PROTECTION. TOTAL SYSTEM PROTECTION. SYMANTEC SOLUTIONS FOR WINDOWS.

Data and loss can happen at any time, for many reasons. Businesses who lack proper backup and recovery processes for servers, desktops and laptops put their productivity, revenue, and reputations at risk. And when lost information is critical or a system outage is prolonged, the business consequences can be serious and lasting.

Symantec **Backup Exec™ 12.5** and **Backup Exec System Recovery™ 8.5** deliver fast, efficient backup and recovery for virtual and physical servers and support for the complete Microsoft Windows server 2008 portfolio and applications. Backed by more than two decades of data protection experience, these Symantec solutions deliver industry-leading Windows data protection and system recovery.

Backup Exec 12.5 for Windows Servers adds powerful new capabilities:

- Virtual Server Protection—automated backups for VMware Virtual Infrastructure and Microsoft Hyper-V servers to disk or tape with granular file and guest machine recovery in seconds
- Expanded Windows coverage—protection for Windows Server 2008, Small Business Server 2008, Essential Business Server 2008, and point-in-time recovery for SQL Server 2008
- Storage Flexibility—enhanced support for NDMP NAS devices and new Remote Media Agent for Linux Servers
- Enterprise Vault protection—backup and quick restoration from critical messaging, file-system, and content-management archives
- Integrated off-site storage—secure backup storage and tape-drive replacement using the Symantec Online Storage
- Centralized management—New Infrastructure Manager to simplify license discovery, upgrades, deployment and patch management

Backup Exec System Recovery 8.5 extends system protection with:

- Automated physical to virtual system conversions enable immediate system recovery, including support for VMware ESX 3.5, Microsoft Hyper-V and Citrix XenServer 4.x
- Fast, flexible recovery—complete server, desktop, or laptop system recovery in minutes, even to dissimilar hardware or virtual servers
- Granular recovery—individual file, folder, Exchange email and SharePoint document recovery from a one-pass backup, using a single interface
- Cold imaging technology provides pre-boot agentless protection of Windows systems
- Central management—single-console management of system backup and recovery environments, including remote systems
- Off-site protection—system protection using remote FTP locations or secondary disk drives for advanced business continuity

Data changes continuously; systems change intermittently. Symantec Backup Exec and Backup Exec System Recovery protect critical business data and systems conveniently, without compromising user productivity or access to applications.

Working together, Symantec Backup Exec and Backup Exec System Recovery minimize the impact of system downtime and data loss to keep your business protected and productive.

Organizations around the world trust award-winning Symantec Backup Exec technology to protect more than 3 million servers and the critical business information they contain.
